Professional Summary

Computer Science undergraduate and Web Engineer with production experience at OpenWay and Vitex Software JSC. Strong frontend foundation in React and Next.js, complemented by hands-on backend development with NestJS, Node.js, GraphQL, PostgreSQL, MongoDB, and Redis. Built and deployed secure banking integrations, real-time multiplayer systems, and scalable web products. Seeking a Full-Stack Developer role where I can own features end to end, deepen system-design skills, and deliver reliable, user-focused software.

Technical Skills

Rating scale:1 = beginner; 2 = basic; 3 = intermediate; 4 = advanced; 5 = expert.

Languages	HTML5 [4/5], CSS3 [4/5], JavaScript [3/5], TypeScript [2/5]
Frontend	Next.js [3/5], React [3/5], TanStack Query/Table [2/5], Tailwind CSS [3/5], Responsive Design [3/5], i18next [2/5], Redux Toolkit [2/5]
Backend	RESTful APIs [3/5], NestJS [2/5], Node.js [2/5], GraphQL [2/5], JWT [2/5], Socket.IO [1/5]
Databases	PostgreSQL [2/5], MongoDB [2/5], Redis [2/5], Prisma ORM [1/5]
Tools/Libraries	Figma [4/5], Storybook [3/5], Git [2/5], Valtio [2/5], Docker [1/5], NextAuth [1/5]
Cloud/DevOps	Railway [3/5], AWS Lightsail [2/5], Vercel [2/5], Cloudflare Tunnel [2/5], CI/CD [2/5], Tailscale [1/5], DNS [1/5]
Supporting Skills	React Native [2/5], Radix UI [2/5], SOAP/XML [2/5], gRPC/Microservices [2/5]

Education

Hanoi University of Science and Technology — **2023 – Present**
Computer Science — *Hanoi, Vietnam*

Work Experience

OpenWay — **June 2026 – September 2026**
Full-Stack Developer Intern — *Hanoi, Vietnam*

- Contribute to a client portal integrated with the WAY4 core-banking platform, translating business operations into secure web workflows.
- Develop features across a Next.js frontend and a NestJS/GraphQL backend, working with PostgreSQL, Prisma, Redis, authentication, and role-based access.
- Support production-style deployment across AWS Lightsail and on-premises infrastructure using Docker, Caddy, Cloudflare Tunnel, and Tailscale.

Vitex Software JSC — **Sep 2025 – Mar 2026**
Frontend React Intern / Trainee — *Hanoi, Vietnam*

- Delivered responsive React and Next.js features for PlanZ AI, Sportech, and SportEnt in a Scrum-based product environment.
- Converted Figma designs into reusable components and implemented routing, internationalization, dashboards, schedules, event lists, and user profiles.
- Fixed Kanban, task-classification, and URL-access-control issues, improving usability and consistency across desktop and mobile views.
- Collaborated with developers and designers to complete assigned features within sprint deadlines and maintain shared component standards.

Selected Projects

WAY4 Client Portal – Core-Banking Integration — **Jul 2026 – Present**
Full-Stack Developer & DevOps Intern | Live Demo

- To make a SOAP/XML banking system accessible to a modern web client, designed a typed GraphQL gateway for client-creation and lookup operations; the frontend consumes a consistent schema without handling XML directly.
- Built the service with NestJS, Apollo, Prisma, PostgreSQL, and Redis; implemented short-lived JWTs, rotating HTTP-only refresh tokens, logout blacklisting, rate limiting, and role-based access control.
- Dockerized the application and connected AWS-hosted and on-premises components through Caddy, Cloudflare Tunnel, and Tailscale, enabling encrypted access to the internal sandbox without exposing inbound ports.

PlanZ AI – Product Management Platform **Jan 2026 – Mar 2026**

Frontend Developer at Vitex Software JSC

- Extended an existing production application by delivering Excel/print export, real-time dashboard updates, and schedule and event management features.
- Implemented responsive interfaces for schedules, notifications, events, settings, and profiles with Next.js 15, React 19, TypeScript, TanStack Query, Tailwind CSS, Radix UI, i18next, NextAuth, and Storybook.
- Resolved critical Kanban, task-categorization, and authorization defects, improving workflow reliability and preventing unauthorized URL access.

SportEnt – Sports Management Platform **Feb 2026**

Independent Full-Stack Developer & DevOps | Live Demo

- Designed and developed an end-to-end sports management product with Next.js, NestJS, and MongoDB, covering both user-facing workflows and APIs.
- Modeled related sports data, built client/server communication, and optimized responsive application performance.
- Established CI/CD and deployed the frontend on Vercel, backend on Railway, and database on MongoDB Atlas, taking the product from concept to a live system.

TutorMatch – Online Tutor Matching Platform **Aug 2025 – Sep 2025**

Full-Stack Developer & DevOps | Source Code

- Built tutor discovery, scheduling, and booking workflows with Next.js, NestJS, TypeScript, Tailwind CSS, MongoDB, and RESTful APIs.
- Applied modular backend architecture and reusable frontend components to keep the codebase maintainable as features and data relationships expanded.

TIBIKI – E-Commerce Platform **Oct 2025 – Dec 2025**

Full-Stack Developer | University Group Project | Source Code

- Co-developed an e-commerce platform for university coursework using Next.js, NestJS, and MongoDB, implementing product catalogs and secure checkout workflows.
- Used a microservices architecture with gRPC for inter-service communication, supporting data exchange between backend services.

Kanbask – Project Management Platform **Jan 2025 – May 2025**

Frontend Developer | University Group Project | Source Code

- Built notification and user-profile modules and implemented JWT authentication for a university team project featuring Kanban boards and progress dashboards.
- Integrated Socket.IO for real-time chat and live updates using Next.js, Express.js, PostgreSQL (NeonDB), and Tailwind CSS.

4player – Real-Time 2v2 Football Game **Aug 2026**

VIBE-CODING PROJECT *| Independent Full-Stack Developer & DevOps | Live Demo*

- Built a server-authoritative Socket.IO game with deterministic 30 Hz simulation to address latency and cheating; added client-side prediction, reconciliation, and entity interpolation for responsive play.
- Created custom 2D collision physics and fixed-timestep Canvas rendering; deployed the frontend and two selectable game servers on Vercel, AWS Lightsail, and on-premises infrastructure.
- Used an AI-assisted vibe-coding workflow to accelerate implementation, while directing the architecture and validating and deploying the finished system.

THPT 2026 – University Admission Score Tracker **Aug 2026**

VIBE-CODING PROJECT *| Independent Full-Stack Developer & DevOps | Live Demo*

- Built a real-time admissions board covering 64 universities, designed for high traffic during the August 13, 2026 announcement window.
- Developed a NestJS watcher with five-minute polling, SHA-256 change detection, Vietnamese keyword matching, bounded concurrency, and audit logs; updates require operator confirmation before publication.
- Used AI-assisted vibe coding across a Next.js/NestJS/PostgreSQL/Redis monorepo, then validated and deployed its four Docker services on AWS behind Cloudflare TLS.
